

During the summer between junior and senior year and throughout the fall term, each senior will work on an independent project whereby he is linked with an alumnus or friend of the school. With his mentor, he will explore a specific topic in great detail. The Project includes an oral presentation as well as a final presentation to the entire school using an alternative medium such as a chapel talk, newspaper article, video, etc.

### Samples:

If a picture is worth a thousand words, Ryan Winn's acceptance video is worth a million. For his Senior Independent Project, Winn filmed a 5 minute lip dub video which included most of the community. Our Admissions team is planning to send the video out to accepted students in March.

Another student that really caught our attention was Ron DiMaggio, who has a passion for cars. He did a wonderful presentation on the evolution of government regulations on the automobile industry. DiMaggio worked with an T-P alum who works in the automotive industry and he reported that his goal is to have that man's same job one day!

Louis Inghilterra had perhaps the most unique, Trinity-Pawling specific Senior Independent Project. Inghilterra decorated a dorm room in Barstow to replicate a room from 1966. The 50th Reunion class enjoyed a throw back in time when they toured the room on Reunion Weekend.

Jackson Wang pursued his passion for fashion and put together a fashion look-book using the clothing from our school store. He secured student models, a photographer, and produced a full photo shoot!

Hunter Olstein and Ira Conklin directed and acted in a short film which has been shared with their colleges as well as the Trinity-Pawling community. The five minute film was written and directed by Olstein. Both students' passion is clearly evident in this excellent production.

Alan Ma loves aviation. He really loves to fly. He also loves World War II history. He wed the two passions with a look at the technological advancement of aviation on the Pacific theater. He explained how the Japanese Zero ruled supreme in 1941 but by 1943 the Allies dwarfed the Zero with technologically superior plane designs. Allen's passion for the topic made his Senior Independent Project come alive.
